

Experience

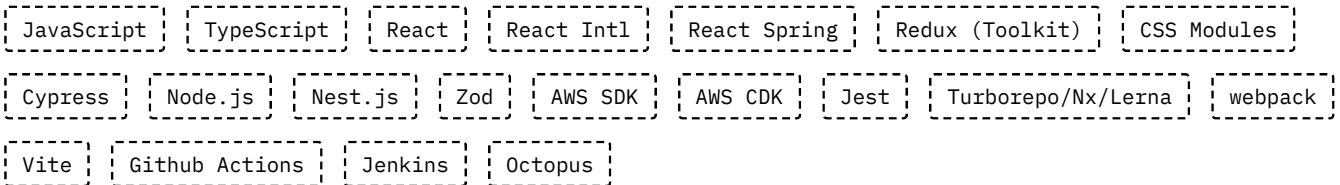

EPAM Systems

Oct 2022 - Now

👤 Senior Software Engineer

☰ Customer specializes in creating personalized photo products such as photo books, posters, and mugs. As a frontend developer, I contributed to enhancing their online editor and implementing innovative features amidst a company merger, ensuring seamless user experiences and technical integration.

- ✓ Designed and implemented A/B tests for refined user flows, including a redesigned photo upload process and a streamlined creation flow, both of which significantly improved user engagement metrics.
- ✓ Contributed to UX improvements for the online editor of photo products, resulting in enhanced user satisfaction and increased conversion rates.
- ✓ Successfully integrated an AI upscaling feature into the online editor, collaborating with external teams from merged companies and ensuring seamless frontend implementation.
- ✓ Led the development of a client web application for a Photo Management solution, enhancing the user experience and streamlining the photo organisation workflow.
- ✓ Implemented modern development practices in the Photo Management solution within the existing project, by introducing essential developer tools such as TypeScript, ESLint, and Prettier. Successfully migrated E2E tests from Cypress v7 to the latest version, resulting in improved code maintainability and testing efficiency while revitalizing the previously stagnant project.

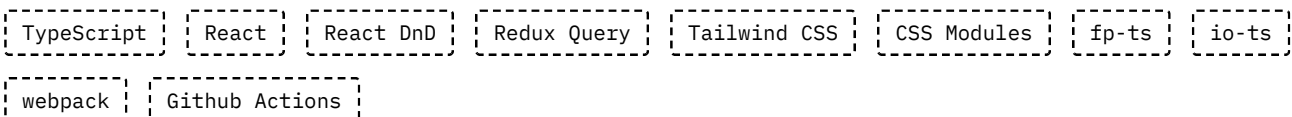

24Slides

Jan 2022 - Sep 2022

👤 FrontEnd Developer

☰ 24Slides is a leading presentation design service that specializes in creating professional and visually compelling presentations for businesses and individuals worldwide. They offer a wide range of custom design services to enhance communication and engagement through effective storytelling and visual design.

- ✓ Designed and implemented a complex order flow featuring numerous user forms, utilizing a custom form library that evolved into a standalone NPM package now integral to company operations.
- ✓ Initiated the transition from Redux to React Query for optimized state management and introduced Tailwind CSS for streamlined and efficient component styling.
- ✓ Integrated io-ts for type-safe data parsing, combined with rigorous TypeScript static type checking, resulting in a near elimination of runtime errors.
- ✓ Mentored and provided code reviews for a Junior Frontend Developer, guiding them in the development of a landing page for the company.
- ✓ Enhanced team productivity and code quality through advocacy for modern development practices and technologies, fostering a more resilient and scalable codebase.

Evojam

Nov 2020 - Dec 2021

👤 FrontEnd Developer

☰ Digital banking application

- ✓ Developed the client-side of a banking application, focusing primarily on mortgage and loans modules, involving complex user forms and workflows.

- ✓ Initiated and executed a significant refactoring of a complex user form, leading to a substantial reduction in related bugs and improving overall system stability.
- ✓ Acted as a trusted developer in the absence of the team lead, assuming responsibilities such as conducting daily stand-ups, reporting to upper management, performing code reviews, and overseeing software delivery.
- ✓ Facilitated the onboarding process for new team members by providing mentorship and offering guidance on the codebase, contributing to team cohesion and knowledge transfer.
